BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT

The project was limited to the renovation of the existing cupola structure atop the existing bell tower at St. Joseph's Church in Krebs, OK. The structure was in poor condition and deteriorating quickly. Wood members were rotting, seals were broken, access to the cupola within the bell tower was dangerous and the roof structure leaked. The structure was removed from the bell tower and repairs made on the ground, then hoisted back into place. Our firm was hired to restore the cupola to it's original glory with new wood members that replicated the existing in material and shape. Materials that could be salvaged were removed, restored and reinstalled.

Sq. Ft. Unknown, Cost: Not Disclosed,

Role: Architectural & Structural
